Special Permits with Integrated Site Plan

Application:	**Special Permits with Integrated Site Plan**
Project Name:	**Deming Road Business Park**
Address:	**Map 10-1, Block 83, Lots 3A, 3A1, 3A2, 3A3**
Zone:	**General Industry -2 (GI-2)**
Applicant:	**Richard Munson, Principal**
Owner:	**Deming Road Business Park LLC.**
Proposal:	**Integrated site plan with contractor shop use on each of four (4) lots**

PROPOSAL

Richard Munson, Deming Road Business Park, LLC is seeking an integrated Site Plan approval for a building on each of four existing lots, with related site improvements and Special Permit approvals for contractor shop uses on each lot:

1. Map 10-1, Block 83, Lot 3A (7,500 sq. ft.) Deming Road, 7,500 sq. ft. building on a rear lot for contractor shop use
2. Map 10-1, Block 83, Lot 3A1 Deming Road, 3,606 sq. ft. building for contractor shop use
3. Map 10-1, Block 83, Lot 3A2 Deming Road, 6,750 sq. ft. building for contractor shop use
4. Map 10-1, Block 83, Lot 3A3 (9,000 sq. ft.) Deming Road, 9,000 sq. ft. building on a rear lot for contractor shop use

in the GI-2 Zone pursuant Berlin Zoning Regulations Sections VII.C.3.e., XII, and XIII.

STAFF COMMENTS/ RECOMMENDATIONS

1. The Public Hearing be kept open as a decision by the IWWCC is pending.
2. Proposed easement documents including cross easements for shared improvements including for drainage, parking and drives be recorded prior to permitting.
3. Any signage for the development is required to be in accordance with Section IX.A of the Berlin Zoning Regulations and will require application for Building Permits which includes applicable zoning reviews.
4. Landscape plan details be submitted for zoning review on each lot's building permit plan.
5. Zoning statistics for each lot be shown on individual permit and as-built plot plans.
6. Hydrant be installed consistent with Berlin Water Control comment.
7. Department comments be resolved to the satisfaction of the applicable department.
8. Submittal of any required bonding in an amount to be determined by staff.
9. Any outstanding conditions from the 2015 PZC approval be carried forward with this approval.

EXISTING CONDITIONS

The site is on the south side of Deming Road, approximately 1/3 mile east of the intersection with Christian Lane. A 5.34 Acre parcel was subdivided into 2 fronting and 2 rear building lots as shown on the subdivision plan filed on the Land Records as Map #4220. A sewer easement for the Mattabassett District (trunk line) runs east to west through the development. There is an access easement shown over the new entrance drive. There are wetland, floodway and flood plain identified on the properties.

BACKGROUND

A subdivision of the property into the four (4) existing lots was reviewed, approved and filed in 2016. The site plan and special permit approvals approved at the same time have expired in accordance with the Regulations and State Statutes. An allowed Statutory extension for an additional five (5) years was not sought prior to expiration. The proposal with submitted applications and plans are the same as approved five years ago.

PROPOSED CONDITIONS

Contractor uses are proposed on each of the lots. Special permit approval is required for contractor uses in the GI2 zone. Lots 3 ad 4 are rear lots; Special permit approval is required for the development of rear lots. The easterly portion of lot 4 will remain in its natural state. Cross easements will be required and should be recorded as necessary for shared improvements.

Traffic Study

A traffic study is required as the total GFA of 26,856 is greater than the threshold for a report of 25,000 s.f. The applicant has indicated to staff that documentation confirming the report submitted for the 2016 approval remains valid will be forthcoming.

Soils Report

The applicant has indicated to staff that documentation confirming the report submitted for the 2016 approval remains valid will be forthcoming.

Stormwater Management (XIII.A.6.g) and Grading

Catch basins equipped with silt soxx that will feed into a subsurface drainage system are proposed. The improved area of the development will be substantially flat at 46-48 elevation with an increased grade over the water and sewer laterals due to installation of rigid protective insulation resulting in a grade of up to 51.

Inland Wetlands and Flood Zones

The easterly portion of the property has wetland, floodway and floodplain areas

The applicant has resubmitted the 2015 plans for IWWC reapproval as well. Staff understands that the wetlands public hearing was opened on 10/6/2020 and remains open with Wetland approval pending.

Per Connecticut General Statute, the Planning and Zoning Commission cannot render a decision until Wetlands has submitted a report of their decision.

Utilities (XIII.A.6.f)

The sites will have public water and sewer, served by Berlin Water Control. Gas will also be provided. Electrical service is required to be underground per the subdivision regulations.

Parking & Driveways (XIII.A.6.d)

A 30-foot-wide shared driveway will serve the 4 separate lots that each will be improved with contractor shop buildings. Required parking and loading for each shop has been provided as part of the integrated site plan. Cross easements should be recorded.

Required parking provided for industrial uses at 1:500 s.f. Total: 55 spaces, Total provided: 60.

Lot 1:	3606 s.f.	8 (1 H/C)
Lot 2	6750 s.f.	14 (1 H/C)
Lot 3	9000 s.f.	18 (1 H/C)
Lot 4	7500 s.f.	15 (1 H/C)

Signs and Lighting (XIII.A.6.e)

A single freestanding sign is shown in a landscaped area adjacent to the access drive. The installation will require appropriate permits to include dimensioned location to confirm compliance with the Regulations. Signage would be subject to Berlin Zoning Regulations Section IX.A. Signage requires building permits which includes zoning review.

Proposed site lighting would be required to be in accordance with the Regulations including full cut off, with no trespass.

Landscaping

A Layout and Landscape Plan dated May 6, 2013 rev to 9/16/20 by Kratzert & Jones Associates has been submitted. Landscape plantings of perennials are proposed along the Deming Road frontage and in parking peninsulas. A landscaped sign area is proposed at the shared drive entrance that includes low flowering shrubs. A landscape border of white pines is proposed along the property line adjacent to 198 Deming Road. The approved landscape plan should be provided on each lot permit application to confirm zoning compliance.

Buildings

Building elevations were provided for Lot 1. The applicant should describe the proposed buildings that are designed to serve contractor uses and confirm if all building will be of a similar design of 1-story, gable roof, vinyl clapboard siding and fiberglass roof shingles. Several overhead garage and entrance doors and no windows are shown on the elevations.

Interdepartmental Comments

Inland Wetlands: "Wetlands/Flood Hazard Permit pending!"

Berlin Water Control: "Berlin Water Control would be the water and sewer provider. It appears each building will have separate water lines and there will be an 8" water main with hydrant. This will be owned by the Developer/owner. We would recommend the hydrant be consistent with our hydrants (Meuller 5-1/4")".
Fire Marshall: "Fire Department access and water supply ok"
Police Chief: (see attached)
The Building Official and Board of Police Commissioners indicated "No Comment"

RE: Deming Road Business Park, LLC
Site Plan Application
Special Permit Application

Dear Mrs. Giusti

As we discussed, Wisniowski & Sullivan, LLC represents Deming Road Business Park, LLC ("DRBP") in regard to its Special Permit Applications and Site Plan Application for property on Deming Road known as 10-1/83/3A, 10-1/83/3A1, 10-1/83/3A2 and 10-1/83/3A3 (the "Property"). These are identical applications filed by Progressive Development Corporation ("PDC") in 2014 which were approved by the Planning & Zoning Commission in 2015 with the only change being the applicant. PDC is solely owned by Richard Munson and at the time of the 2014 application the Property was owned by Karen Berube. Following the 2015 approvals DRBP, which is solely owned by Munson, purchased the Property from Berube. Enclosed please find the following:

SPECIAL PERMIT

1. An Application/Application Checklist and a check in the amount of $1,120.00
2. Written Narrative of Proposal;
3. List of names and addresses of owners of property within 500 feet of the subject property. The Proof of mailing will be submitted once a Public Heating date is scheduled;

4. Acknowledgement of sign posting requirement;

5. Three (3) copies of a traffic study;

6. Three (3) copies of the environmental impact analysis submitted with the 2014 application. Concerning section XIIB5i of the regulation, while the Berlin Inland Wetlands & Watercourses Commission approved the 2014 application, an identical application was resubmitted on September 3, 2020 and is pending. Concerning section XIIB5j (new since 2014), a Phase 2 Environmental Study was performed which revealed no environmental contamination on the property; and

7. Three (3) copies of the Soil Resource Consultants report which was submitted with the 2014 application.

Finally, if possible, please schedule the Public Hearing on the applications for the Commission's October 15, 2020 meeting.

SITE PLAN

1. An Application/Application Checklist and a check in the amount of $2,465.00;

2. Five (5) sets of 24"x36" Design Prints and Twelve (12) sets of 12"x18" Design Prints;

3. Five (5) sets of 24"x36" Architectural Plans and Twelve (12) sets of 12"x18" Architecural Plans; and

4. Two (2) copies of The Drainage Report which is the same Drainage Report submitted with the 2014 application.

Please note that the Landscaping Plan will be submitted.

Sincerely

Timothy Sullivan

Special Permit Application Written Narrative

PROPERTY: **Deming Road, Berlin, CT**
Map/Block/Lot **10-1-83-3A**
10-1-83-3A1
10-1-83-3A2
10-1-83-3A3

The proposed development is an integrated four lot subdivision with a light industrial building on each lot. Access to the four lots is by way of a shared driveway as depicted on the proposed site plan. The subdivision was unanimously approved by the Berlin Planning and Zoning Commission on February 12, 2015. The intended use is for small contractors such as carpenters, electricians, plumbers, landscapers, courier services, industrial repair services and HVAC companies. The proposed buildings range in size from 3,606 sq. ft. to 9,000 sq. ft.

The Special Permit is required by Building Zoning regulations Section VII C3C because the Application proposes rear lots. The total number of persons to occupy the premises could be up to 50 daily. The parking and loading requirements are met as indicated on the proposed site plan. It is anticipated that there will be up to 75 entries and exits or motor vehicle traffic during a normal day.

Re: Deming Road Business Park, LLC

I have reviewed the submitted materials regarding the proposed development, Deming Road Business Park, LLC. There appears to be ample ISD in both directions and adequate handicapped parking with proper signage and markings is also proposed. The plans also call for the business park egress to be stop sign controlled, which is appropriate.

There are no traffic related issues anticipated outside of what is contained in the submitted report.

January 21, 2015

SRC Job No. 14-90

Richard Munson
Progressive Development Corporation
P.O. Box 812
Plainville, CT 06062-0812

Dear Mr. Munson:

Re: **Environmental Impact Analysis - Deming Road Business Park - 198 Deming Road - Berlin, CT**

At your request, I have completed an onsite investigation and analysis of the inland wetland and watercourse resources associated this proposed development site. The purpose of my analysis was assess the existing character and functioning of the wetland and watercourse resources and the potential for adverse impacts to those resources from this proposed project. As part of my evaluation I utilized site plan drawings prepared by your project engineers, Kratzert Jones& Associates dated as revised through November 24, 2014. I also have researched the CT DEP Natural Diversity Database for any listing of plant or animal specie sightings on or nearby to this development site. The latest mapping from that agency source indicated no listings as of December 2014. I have attached a copy of the relevant section of the map with printing date.

No direct impacts to inland wetlands or watercourses are proposed by any of phase of this development. Wetland and watercourse resource areas are located along the eastern side of the proposed development. A section of Webster Brook flows along the eastern portion of this property. The ground water classification for Webster Brook, according to CT DEEP standards, is GB. A GB classification relates to "uses for industrial process water and cooling waters and base flow for hydraulically-connected water bodies and is assumed not for human consumption without treatment.

One (1) area of associated wetland and watercourses have been identified for this study. Located along the eastern side of the project site, the wetland resource area (A) consists of a well defined section of Webster Brook and a narrow strip of inland wetland soils along the Brook's western bank. The area of wetland soil widens along the southern boundary and is connected to a larger wetland-watercourse area south of the subject site. Wetland Area A would be classified as a palustrine wooded type resource. Red Maples and American Elm dominate the very young tree strata with a dense stand of Silky dogwoods dominating the shrub layer. Upland portions of the site where development is proposed consist of lightly wooded to open grass areas. Sapling to pole sized Cottonwoods and Locust trees dominate. The shrub where present is dominated by invasive species including Russian Olive and Multiflora Rose

I have included a series of photographs on the next pages to provide a representative view of existing vegetative cover patterns.

Photo #1 - Southerly View of Vegetative Cover Along Wetland Watercourse Boundary

Photo #2 - Close-up View of Vegetation Along Wetland-Watercourse Boundary

Photo #3 - Northerly View of Wetland Watercourse in SE Corner (Wetland Flag is #9)

Photo #4 - Northerly View of Webster Brook & Associated Wetland

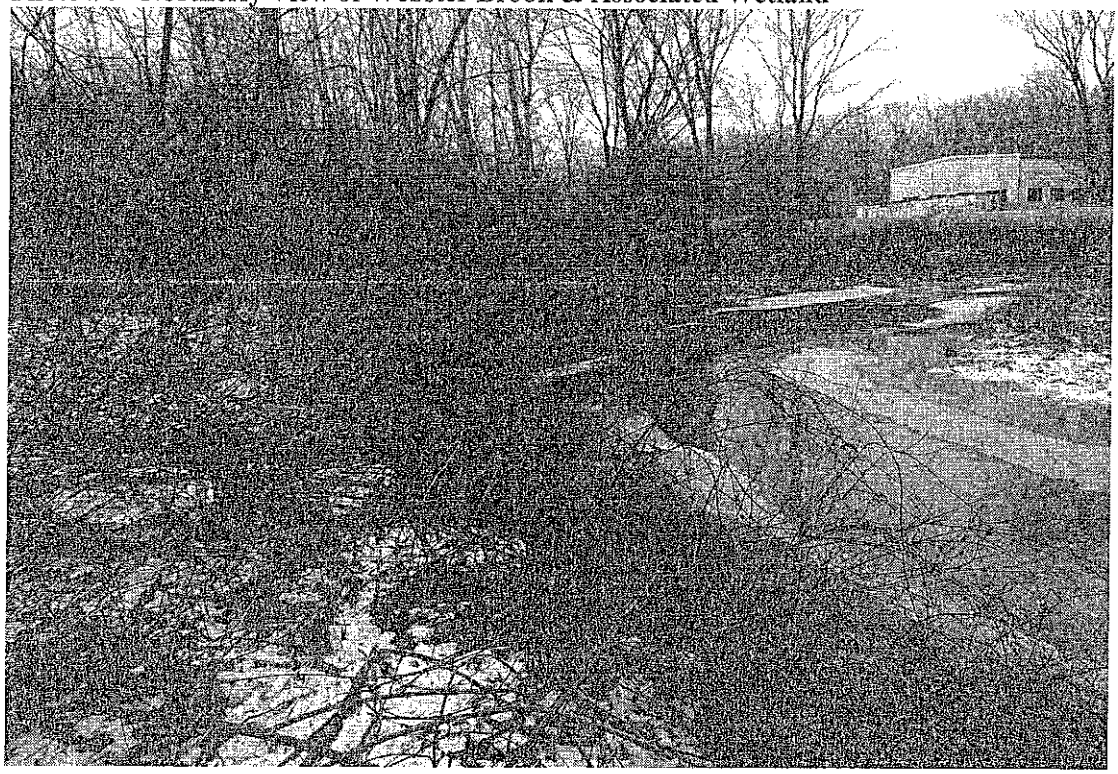

Photo #5 - Northerly View of Uplands Proposed for Development

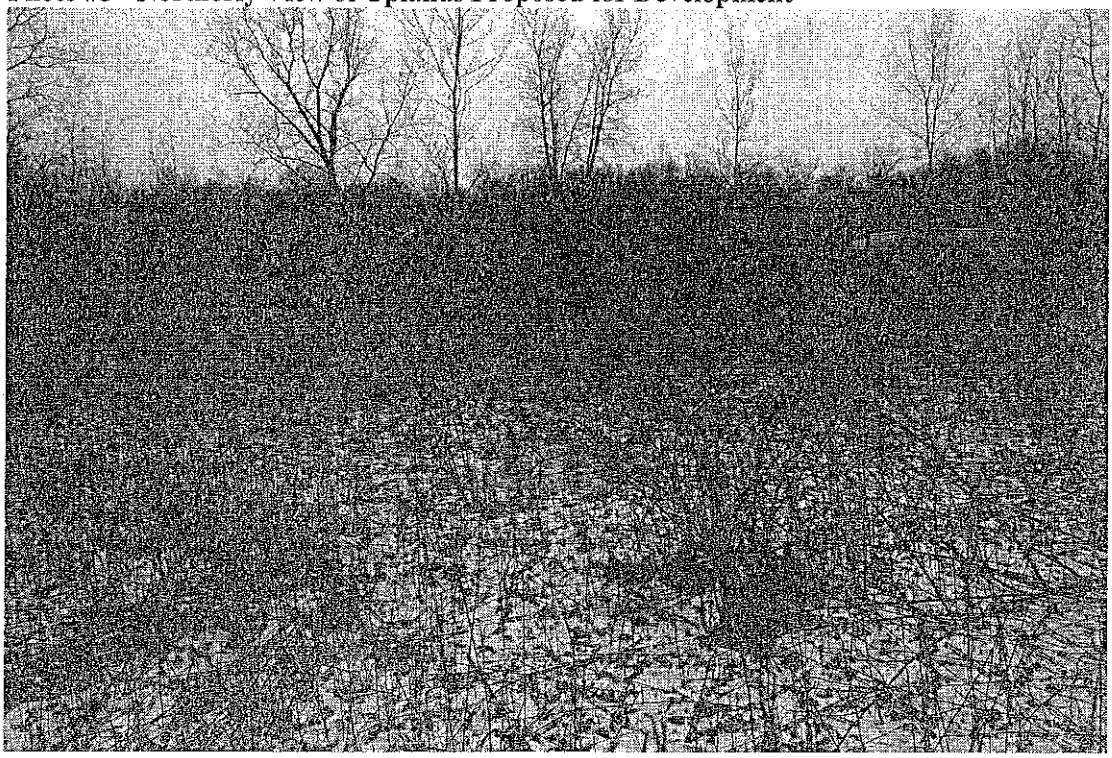

Photo #6 -Southerly View of Vegetative Cover inUplands Proposed for Development

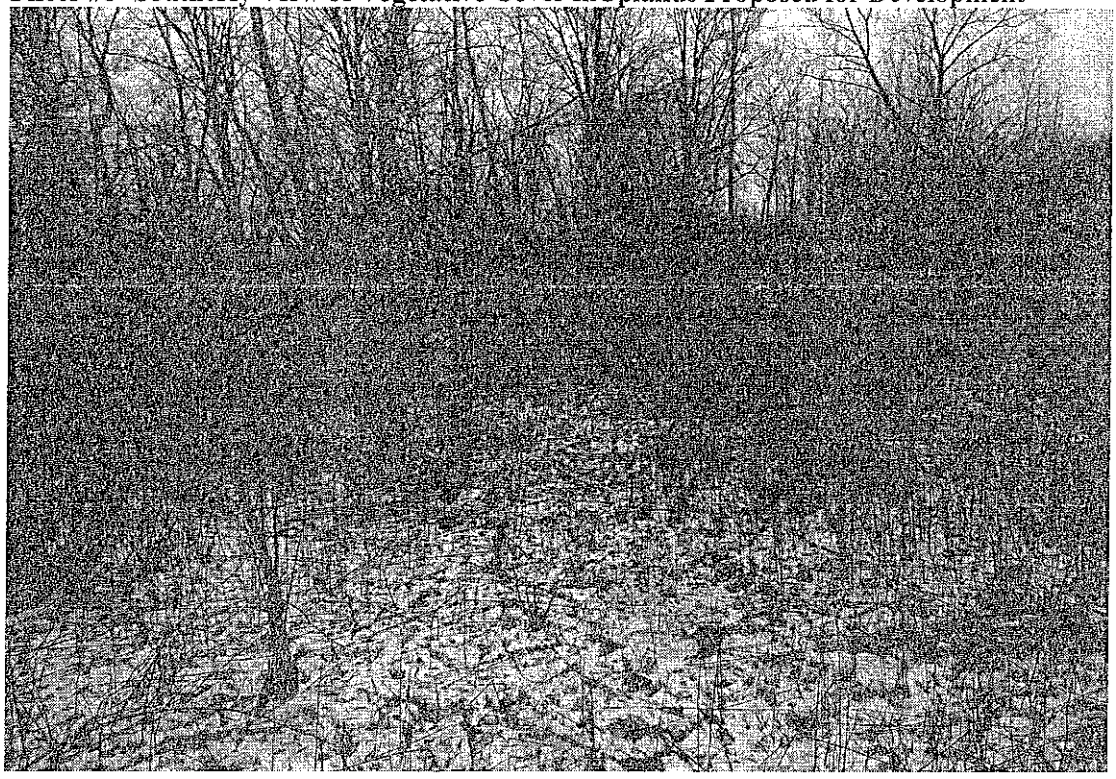

WETLAND FUNCTIONS AND VALUES

The US Army Corps of Engineers utilizes an evaluation methodology that provides for a descriptive evaluation of wetland and watercourse resources. The methodology is contained within a document entitled "The Highway Methodology Workbook, Supplement", US Army Corps of Engineers, New England Division, November 1995. Rather than providing a "rating" number or subjective rank such as low, medium, or high, this evaluation approach provides a qualitative description of the physical characteristics of the wetland/watercourse resource, identifies the functions and values exhibited, and these basis for the conclusions using "best professional judgment".

The following Functions and Values were identified as existing within the wetland resource subareas by the evaluation process. The documentation for the evaluation can be found attached to this report.

Groundwater Recharge/Discharge functioning was evaluated and found to not be significant based on the fine grained soil material and very flat slopes of the wetland-watercourse area. The downward infiltration (recharge of surface water would be impeded by the fine grained dense soil structure.

Floodflow Alteration functioning was evaluated and found to be one of the primary functions of the resource area. The narrow band of wetland soils which widens in the southern portion of the site provides for temporary storage of flood waters during out of bank flow conditions. This functioning is somewhat limited by the relatively small size of the wetland area as compared to the upstream drainage area.

Finfish and Shellfish Habitat functioning is present within the limits of Webster Brook. The observed in channel sedimentation and CT DEEP documented lower water quality ratings do reduce the significance of the onsite resource area for these habitats.

Sediment and Toxicant Retention functioning was found to be of some significance due to the flat densely vegetated characteristics of the inland wetland soil areas. Visible signs of sedimentation retention were observed especially in the southern limits of the wetlands.

Nutrient Removal functioning, while present within the onsite wetland soils, is very limited based on the very small size of the resource area relative to its drainage area. The dense shrub and tree vegetation do provide for some renovation functioning when out of bank flow conditions persist.

Production Export functioning was observed within the onsite wetland-watercourse resource area. Woody detritus and surface leaf cover indicate production of natural organic materials available for offsite export by Webster Brook.

Sediment/Shoreline Stabilization functioning was provided for along the bank of Webster Brook by the dense stands of Silky Dogwood shrubs. The dense root systems of this shrub provide soil stabilization while the above ground woody stems promote the collection and retention of sediments, woody detritus and leaves.

Wildlife Habitat functioning was evaluated and found to be consistent with localized edge area habitat conditions that are in close proximity to high levels of human activity and noise generation. Only those species well adapted to these conditions could be expected to utilize the subject resource area. Less tolerant species while possibly using the resource area as a temporary stop-off point would not be expected to use the site for long term habitat needs.

Recreation Value, Educational/Scientific Value, Uniqueness/Heritage Value, and Visual Quality/Aesthetics Values were analyzed and found to not be present in any measure degree within the onsite wetland-watercourse resource area. The amount, proximity, and type of surrounding landuses greatly inhibit or eliminate the evaluation criteria for these values.

Comments

The proposed development includes the construction of four (4) separate buildings and associated parking on individual lots. No direct impacts to wetland-watercourse areas are proposed. Impacts to Upland Review Zone areas are limited to: (1) portion of Building #4 and its associated grading; and (2) the four easternmost parking spaces on Lot #4.

Stormwater runoff from the entire site will be discharged through AbTech water quality structures at each of the 5 proposed catchbasins before reaching either Webster Brook or the existing drainage system in Deming Road.

Conclusion

In my professional opinion, this development as proposed does not represent any significant or measurable potential for adverse environmental impacts to the existing wetland-watercourse resources or their long term functioning at present levels.

If you have any questions regarding this impact evaluation, or need additional assistance with this site, please contact me.

Sincerely,

David H. Lord

APPENDIX

Natural Diversity Data Base Areas

BERLIN, CT

December 2014

State and Federal Listed Species & Significant Natural Communities

Town Boundary

NOTE: This map shows general locations of State and Federal Listed Species and Significant Natural Communities. Information on listed species is collected and compiled by the Natural Diversity Data Base (NDDB) from a number of data sources. Exact locations of species have been buffered to produce the general locations. Exact locations of species and communities occur somewhere in the shaded areas, not necessarily in the center. A new mapping format is being employed that more accurately models important riparian and aquatic areas and eliminates the need for the upstream/downstream searches required in previous versions.

This map is intended for use as a preliminary screening tool for conducting a Natural Diversity Data Base Review Request. To use the map, locate the project boundaries and any additional affected areas. If the project is within a shaded area there may be a potential conflict with a listed species. For more information, complete a Request for Natural Diversity Data Base State Listed Species Review form (DEP-APP-007), and submit it to the NDDB along with the required maps and information. More detailed instructions are provided with the request form on our website.

www.ct.gov/deep/nddbrequest

Use the CTECO Interactive Map Viewers at www.cteco.uconn.edu to more precisely search for and locate a site and to view aerial imagery with NDDB Areas.

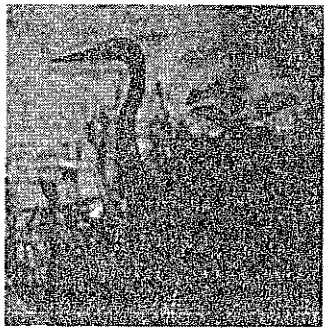
Wetland Functions and Values
A Descriptive Approach

What are wetland functions and values?

Wetland functions and values form a very important part of Section 404 permit decisions by the Corps. **Functions** are self-sustaining properties of a wetland ecosystem that exist in the absence of society. Functions result from both living and non-living components of a specific wetland. These include all processes necessary for the self-maintenance of the wetland ecosystem such as primary production and nutrient cycling. Therefore, functions relate to the ecological significance of wetland properties without regard to subjective human values.

For example, a wetland that has slowly moving water performs the function of retaining sediments and toxicants. That is, the physical characteristic of a wetland that causes surface water to move slowly serves to let suspended particulates settle out of that water. This function traps sediments carried to it in runoff from uplands or upstream areas and clarifies the water. Identification of that function helps the Corps evaluate (1) whether the impacts of a project may impair that function and (2) whether such impacts are permissible.



Great Blue Heron

Values are benefits that derive from either one or more functions and the physical characteristics associated with a wetland. Most wetlands have corresponding societal value. This is recognized in various federal, state, and local wetland legislation that was enacted to protect these resources. The value of a particular wetland function, or combination thereof, is based on human judgment of the worth, merit, quality, or importance attributed to those functions. For example, a particular wetland might be considered valuable because it is known to store flood waters upgradient or adjacent to a developed area. That function is valuable to society because it attenuates flood waters which lessens the destructive severity of flood events. Another wetland might be valued because its combination of diverse wildlife habitat and picturesque setting offers various recreational and educational opportunities. The judgment of value is based on the opinion of recognized experts whose views are ultimately weighed and considered by the Corps in its permit process.

What wetland functions and values are considered by the Corps in its Section 404 permit process?

The 13 functions and values that are considered by the Regulatory Branch for any Section 404 wetland permit are listed below. The list includes eight functions and five values. Values are grouped together at the end of the list.

These are not necessarily the only wetland functions and values possible, nor are they so precisely defined as to be unalterable. However, they do represent the best working "palette" of descriptors which can be used to paint an objective representation of the wetland resources associated with a proposed project.

GROUNDWATER RECHARGE/DISCHARGE — This function considers the potential for a wetland to serve as a groundwater recharge and/or discharge area. Recharge should relate to the potential for the wetland to contribute water to an aquifer. Discharge should relate to the potential for the wetland to serve as an area where groundwater can be discharged to the surface.

FLOODFLOW ALTERATION (Storage & Desynchronization) — This function considers the effectiveness of the wetland in reducing flood damage by attenuation of floodwaters for prolonged periods following precipitation events.

FISH AND SHELLFISH HABITAT — This function considers the effectiveness of seasonal or permanent waterbodies associated with the wetland in question for fish and shellfish habitat.

SEDIMENT/TOXICANT/PATHOGEN RETENTION — This function reduces or prevents degradation of water quality. It relates to the effectiveness of the wetland as a trap for sediments, toxicants, or pathogens.

NUTRIENT REMOVAL/RETENTION/TRANSFORMATION — This function relates to the effectiveness of the wetland to prevent adverse effects of excess nutrients entering aquifers or surface waters such as ponds, lakes, streams, rivers, or estuaries.

PRODUCTION EXPORT (Nutrient) — This function relates to the effectiveness of the wetland to produce food or usable products for humans or other living organisms.

SEDIMENT/SHORELINE STABILIZATION — This function relates to the effectiveness of a wetland to stabilize streambanks and shorelines against erosion.

WILDLIFE HABITAT — This function considers the effectiveness of the wetland to provide habitat for various types and populations of animals typically associated with wetlands and the wetland edge. Both resident and/or migrating species must be considered. Species lists of observed and potential animals should be included in the wetland assessment report.

RECREATION (Consumptive and Non-Consumptive) — This value considers the effectiveness of the wetland and associated water-courses to provide recreational opportunities such as canoeing, boating, fishing, hunting, and other active or passive recreational activities. Consumptive activities consume or diminish the plants, animals, or other resources that are intrinsic to the wetland, whereas non-consumptive activities do not.

EDUCATIONAL/SCIENTIFIC VALUE — This value considers the effectiveness of the wetland as a site for an "outdoor classroom" or as a location for scientific study or research.

UNIQUENESS/HERITAGE — This value relates to the effectiveness of the wetland or its associated waterbodies to produce certain special values. Special values may include such things as archaeological sites, unusual aesthetic quality, historical events, or unique plants, animals, or geologic features.

VISUAL QUALITY/AESTHETICS — This value relates to the visual and aesthetic qualities of the wetland.

THREATENED or ENDANGERED SPECIES HABITAT — This value relates to the effectiveness of the wetland or associated waterbodies to support threatened or endangered species.

ES

APPENDIX A: ACOE HIGHWAY METHODOLOGY CRITERIA

GROUNDWATER RECHARGE/DISCHARGE - Considers the potential for groundwater recharge and/or discharge.

CONSIDERATIONS/QUALIFIERS

1. Public or private wells occur downstream of the wetland.
2. Potential exists for public or private wells downstream of the wetland.
3. Wetland is underlain by stratified drift.
4. Gravel or sandy soils present in/or adjacent to the wetland.
5. Fragipan does not occur in the wetland.
6. Fragipan, impervious soils, or bedrock, does occur in the wetland.
7. Wetland is associated with a perennial or intermittent watercourse.
8. Signs of groundwater recharge are present or piezometer data demonstrates recharge.
9. Wetland is associated with a watercourse but lacks a defined outlet or contains a constricted outlet.
10. Wetland contains only an outlet.
11. Groundwater quality of stratified drift aquifer of wetland meets drinking water standards.
12. Quality of water associated with the wetland is high.
13. Signs of groundwater discharge are present (e.g. springs).
14. Water temperature suggests it is a discharge site.
15. Wetland shows signs of variable water levels.
16. Piezometer data demonstrates discharge.

FLOODFLOW ALTERATION - Considers the effectiveness of the wetland in reducing flood damage by water retention.

CONSIDERATIONS/QUALIFIERS

1. Area of this wetland is large relative to its watershed.
2. Wetland occurs in the upper portions of its watershed.
3. Effective flood storage is small or non-existent upslope of or above the wetland.
4. Wetland watershed contains a high degree of impervious surfaces.
5. Wetland contains hydric soils which are able to absorb and detain water.
6. Wetland exists in a relatively flat area that has flood storage potential.
7. Wetland has an intermittent outlet, ponded water, or signs are present of variable water level.
8. During flood events, wetland retains higher volumes of water than under normal rainfall events.
9. Wetland receives and retains overland or sheet flow runoff from surrounding uplands.
10. In the event of a large storm, wetland may receive and detain excessive flood water from watercourse.
11. Valuable properties or resources are located in or near the floodplain downstream from wetland.
12. The watershed has a history of economic loss due to flooding.
13. This wetland is associated with one or more watercourses.
14. This wetland watercourse is sinuous or diffuse.
15. This wetland outlet is constricted.
16. Channel flow velocity is affected by this wetland.
17. Land uses downstream are protected by this wetland.
18. This wetland contains a high density of vegetation.

FISH AND SHELLFISH HABITAT - Considers effectiveness of watercourse associated with wetland for fish habitat.

CONSIDERATIONS/QUALIFIERS

1. Forest land dominant in the watershed above this wetland.
2. Abundance of cover objects present.
3. Size of this wetland is able to support large fish/shellfish populations.
4. Wetland is part of a larger, contiguous watercourse.
5. Wetland has sufficient size/depth in open water so as not to freeze solid, retains some open water in winter.
6. Stream width (bank to bank) is more than 50 feet.
7. Quality of the watercourse associated with wetland able to support healthy fish/shellfish populations.
8. Streamside vegetation provides shade for the watercourse.
9. Spawning areas are present (submerged vegetation or gravel beds).
10. Food is available to fish/shellfish populations within this wetland.
11. Barrier(s) to anadromous fish (dams, including beaver dams, water falls, road crossing, etc.) are absent from stream.
12. Evidence of fish is present.
13. Wetland is stocked with fish.

14. The watercourse is persistent.
15. Man-made streams are absent.
16. Water velocities are not too excessive for fish usage.
17. Defined stream channel is present.

SEDIMENT/TOXICANT/PATHOGEN RETENTION -Considers effectiveness of the wetland as a trap for sediments, toxicants, or pathogens in runoff from surrounding uplands, or upstream eroding wetland areas.

CONSIDERATIONS/QUALIFIERS

1. Potential sources of excess sediment are in the watershed above the wetland.
2. Potential or known sources of toxicants are in the watershed above the wetland.
3. Opportunity for sediment trapping by slow moving water or deepwater habitat are present in this wetland.
4. Mineral, fine grained, or organic soils are present.
5. Long duration water retention time is present in this wetland.
6. Public or private water sources occur downstream.
7. The wetland edge is broad and intermittently aerobic.
8. The wetland is known to have existed for more than 50 years.
9. Drainage ditches have not been constructed in the wetland.
10. Wetland is associated with an intermittent or perennial stream, or a lake.
11. Channelized flows have visible velocity decreases in the wetland.
12. Effective floodwater storage in wetland is occurring. Areas of impounded open water are present.
13. No indicators of erosive forces are present. No high water velocities are present.
14. Diffuse water flows are present in the wetland.
15. Wetland has a high degree of water and vegetation interspersion.
16. Dense vegetation provides opportunity for sediment trapping and/or signs of sediment accumulation are present.

NUTRIENT REMOVAL/RETENTION/TRANSFORMATION -Considers effectiveness of wetland as a trap for nutrients in runoff from uplands or contiguous wetlands, and ability of wetland to process these nutrients into other trophic levels.

CONSIDERATIONS/QUALIFIERS

1. Wetland is large relative to the size of its watershed.
2. Deep water or open water habitat exists.
3. Overall potential for sediment trapping exists in the wetland.
4. Potential sources of excess nutrients present in the watershed above the wetland.
5. Wetland saturated for most of the season. Ponded water is present in the wetland.
6. Deep organic/sediment deposits are present.
7. Slowly drained mineral, fine grained, or organic soils, are present.
8. Dense vegetation is present.
9. Emergent vegetation and/or dense woody stems are dominant.
10. Aquatic diversity/abundance sufficient to utilize nutrients.
11. Opportunity for nutrient attenuator exists.
12. Vegetation diversity/abundance sufficient to utilize nutrients.
13. Waterflow through this wetland is diffuse.
14. Water retention/detention time in this wetland is increased by constricted outlet or thick vegetation.
15. Water moves slowly through this wetland.

PRODUCTION EXPORT (Nutrient) - Considers effectiveness of wetland to produce food or usable products.

CONSIDERATIONS/QUALIFIERS

1. Wildlife food sources grow within this wetland.
2. Detritus development is present within this wetland
3. Economically or commercially used products found in this wetland.
4. Evidence of wildlife use found within this wetland.
5. Higher trophic level consumers are utilizing this wetland.
6. Fish or shellfish develop or occur in this wetland.
7. High vegetation density is present.
8. Wetland exhibits high degree of plant community structure/species diversity.
9. High aquatic diversity/abundance is present.
10. Nutrients exported in wetland watercourses (permanent outlet present).
11. "Flushing" of relatively large amounts Of organic plant material occurs from this wetland.
12. Wetland contains flowering plants which are used by nectar-gathering insects.
13. High production levels occurring however, no visible signs of export (assumes export is attenuated).

SEDIMENT/SHORELINE STABILIZATION - Considers effectiveness of wetland to stabilize stream banks, shorelines.

CONSIDERATIONS/QUALIFIERS

1. Indications of erosion, siltation present
2. Topographical gradient is present in wetland.
3. Potential sediment sources are present up-slope.
4. No distinct shoreline or bank is evident between the waterbody and the wetland or upland.
5. A sharp bank between the open waterbody or stream and the adjacent land exists with dense roots throughout.
6. Wide wetland (>10') bordering watercourse, lake, or pond.
7. High flow velocities in the wetland.
8. Potential sediment sources present upstream.
9. The watershed is of sufficient size to produce channelized flow.
10. Open water fetch is present.
11. Boating activity is present.
12. Dense vegetation is bordering watercourse, lake, or pond.
13. High percentage of energy absorbing emergents and/or shrubs bordering watercourse, lake or pond.
14. Vegetation comprised of large trees and shrubs which withstand floods and stabilize shoreline on a large scale (feet).
15. Dense herb layer which stabilizes sediments/shoreline on a small scale (inches) during flood erosive events.

WILDLIFE HABITAT - Considers effectiveness of wetland to provide habitat for various resident and migrant animals.

CONSIDERATIONS/QUALIFIERS

1. Wetland is not degraded by human activity.
2. Water quality of the watercourse, pond, or lake wetland meets or exceeds Class A or B standards.
3. Wetland is not fragmented by development.
4. Upland surrounding this wetland is undeveloped.
5. 40% of wetland edge bordered by upland wildlife habitat (e.g. woodland, active farmland, idle land) 500'wide.
6. Wetland contiguous with other wetland systems connected by watercourse or lake.
7. Wildlife overland access to other wetlands is present.
8. Wildlife food sources are within this wetland or are nearby.
9. Wetland exhibits a high degree of interspersion of vegetation classes and/or open water.
10. Two or more islands or inclusions of upland within the wetland are present.
11. Dominant wetland class includes deep or shallow marsh or wooded swamp.
12. More than three acres of shallow permanent open water including streams in or adjacent to wetland are present.
13. Density of the wetland vegetation is high.
14. Wetland exhibits a high degree of plant species diversity.
15. Wetland exhibits a high degree of diversity in plant community structure.
16. Plant/animal indicator species present.
17. Animal signs observed (tracks, scats, nesting areas, etc.)
18. Seasonal uses vary for wildlife, wetland appears to support varied population diversity.
19. Wetland contains or has potential to contain a high population of insects.
20. Wetland contains or has potential to contain large amphibian populations.
21. Wetland has a high avian utilization or its potential.
22. Indications of less disturbance-tolerant species present.
23. Signs of wildlife habitat enhancement present (birdhouses, nesting boxes, etc.).

RECREATION - Considers suitability of wetland and associated watercourses to provide recreation.

CONSIDERATIONS/QUALIFIERS

1. Wetland is part of a recreation area, park, forest, or refuge.
2. Fishing is available within or from the wetland.
3. Hunting is permitted in the wetland.
4. Hiking occurs or has potential to occur within the wetland.
5. Wetland is a valuable wildlife habitat.
6. The watercourse, pond, or lake, associated with the wetland is unpolluted.
7. High visual/aesthetic quality of this potential recreation site.
8. Access to water is available at this potential recreation site for boating, canoeing, or fishing.
9. Watercourse associated with this wetland is wide and deep enough to accommodate non-powered boating.

10. Off-road public parking available at the potential recreation site.
11. Accessibility and travel ease is present at this site.
12. The wetland is within a short drive or safe walk from highly populated public and private areas.

EDUCATIONAL/SCIENTIFIC VALUE - Considers suitability of wetland as outdoor classroom or for scientific study.

CONSIDERATIONS/QUALIFIERS

1. Wetland contains or is known to contain threatened, rare, or endangered species.
2. Little or no disturbance is occurring in this wetland.
3. Potential educational site contains a diversity of accessible or potentially accessible wetland classes.
4. Potential educational site is undisturbed and natural.
5. Wetland is considered to be a valuable wildlife habitat.
6. Wetland is located within a nature preserve or wildlife management area.
7. Signs of wildlife habitat enhancement present (bird houses, nesting boxes, food sources, etc.).
8. Off-road parking at potential educational site suitable for school bus access in or near wetland.
9. Potential educational site is within safe walking distance or a short drive to schools.
10. Potential educational site within safe walking distance to other plant communities.
11. Direct access to perennial stream at potential educational site available.
12. Direct access to pond or lake at potential educational site available.
13. No known safety hazards within the potential educational site.
14. Public access to the potential educational site is controlled.
15. Handicap accessibility is available.
16. Site is currently used for educational or scientific purposes.

UNIQUENESS/HERITAGE - Considers effectiveness of the wetland or its waterbodies to provide special values.

CONSIDERATIONS/QUALIFIERS

1. Upland surrounding wetland primarily urban.
2. Upland surrounding wetland developing rapidly.
3. More than 3 acres of shallow permanent open water occur in wetlands (less than 6.6' deep) including streams.
4. Three or more wetland classes present.
5. Deep and/or shallow marsh, or wooded swamp dominate.
6. High degree of interspersion of vegetation and/or open water occurring in this wetland.
7. Well-vegetated stream corridor (15 feet on each side of the stream) occurs in this wetland.
8. Potential educational site is within a short drive or a safe walk from schools.
9. Off-road parking at potential educational site is suitable for school buses.
10. No known safety hazards exist within this potential educational site.
11. Direct access to perennial stream or lake at potential educational site.
12. Two or more wetland classes visible from primary viewing locations.
13. Low-growing wetlands (marshes, scrub-shrub, open water) visible from primary viewing locations.
14. Half an acre of open water or 200 feet of stream is visible from the primary viewing locations.
15. Large area of wetland is dominated by flowering plants, plants with vibrant colors in different seasons.
16. Appearance of the wetland visible from primary viewing areas is unpolluted and/or undisturbed.
17. Overall view of the wetland is available from the surrounding upland.
18. Quality of the water associated with the wetland is high.
19. Opportunities for wildlife observations are available.
20. Historical buildings occur within the wetland.
21. Presence of pond or pond site and remains of a dam occur within the wetland.
22. Wetland within 50 yards of the nearest perennial watercourse.
23. Visible stone or earthen foundations, dams, standing structures or associated features occur in wetland.
24. Wetland contains critical habitat for a state or federally listed threatened or endangered species.
25. Wetland is known to be a study site for scientific research.
26. Wetland is a natural landmark or recognized by the natural heritage inventory as exemplary natural area.
27. Wetland has local significance because it serves several functional values.
28. Wetland has biological, geological, or other features which are locally rare or unique.
29. Wetland is known to contain an important archaeological site.
30. Wetland is hydrologically connected to a state or federally designated scenic river.
31. Wetland is located in an area experiencing a high wetland loss rate.

VISUAL QUALITY/AESTHETICS - Considers the visual quality of the wetland.
CONSIDERATIONS/QUALIFIERS

1. Multiple wetland classes visible from primary viewing locations.
2. Emergent marsh and/or open water visible from primary viewing locations.
3. Diversity of vegetation species visible from primary viewing locations.
4. Wetland dominated by flowering plants, or plants which turn vibrant colors in different seasons.
5. Land use surrounding the wetland is undeveloped as seen from primary viewing locations.
6. Visible surrounding land use form contrasts with wetland.
7. Wetland views absent of trash, debris, and signs of disturbance.
8. Wetland is considered to be a valuable wildlife habitat.
9. Wetland is easily accessed.
10. Low noise level at primary viewing locations.
11. Unpleasant odors absent at primary viewing locations.

ENDANGERED SPECIES HABITAT- Considers the ability of wetland to support threatened/endangered species.
CONSIDERATIONS/QUALIFIERS

1. Wetland contains or is known to contain threatened or endangered species.
2. Wetland contains critical habitat for a state or federally listed threatened or endangered species.

Re: Traffic Study
Deming Road Business Park
198 Deming Road, Berlin CT

Dear Mr. Tranquillo:

As requested, VLIET & O'NEILL, LLC has investigated the traffic impacts associated with the proposed Deming Road Business Park. This letter/report has been prepared to summarize our findings and opinions relative to the traffic engineering aspects of the project. Our work has been performed to address the Berlin Municipal Code concerning Special Permit Uses Involving High Traffic Generators.

The development site is currently vacant and has not been previously developed. The proposed plan is to construct four (4) buildings with a total gross floor area of 26,856 SF. Sixty (60) parking spaces are to be provided. There will be a total of nineteen (19) business units provided within the buildings. The use of the units will be for small startup contractors specializing in construction and/or service (plumbers, electricians, carpenters, etc…) businesses. Each unit will consist of an interior garage bay, storage area, small office space and lavatory.

EXISTING ROADWAY CONDITIONS

Deming Road begins at the intersection with Christian Lane 1,800 ft. west of the site and runs east for approximately 0.85 miles (4,500 ft.) to the intersection with the Berlin Turnpike (State Routes 5/15). Deming Road east of the Berlin Turnpike becomes State Route 160 and continues through Berlin into Rocky Hill and ending at the intersection with Route 3.

Deming Road in the vicinity of the development site is a two lane bi-directional roadway with an approximate total width of forty feet (40'). This geometry provides for a twenty-one foot (21') westbound lane width and a nineteen foot (19') eastbound lane width.

The posted speed limit on Deming Road in the vicinity of the site is 40 MPH in both directions. The 85% speed (speed at which 85% of the vehicles are traveling or lower) is approximately 48 MPH in both directions.

Deming Road intersects Christian Lane west of the site at a 3-way traffic signal controlled "T" intersection. East of the site, Deming Road intersects the Berlin Turnpike at a 4-way traffic signal controlled intersection.

The proposed site access driveway intersection with Deming Road will be a stop sign controlled "T" intersection. The two lane bidirectional driveway will have a total width of twenty four feet (24') and will intersect Deming Road at a ninety degree (90°) angle.

TRAFFIC VOLUMES

In order to determine the traffic impact of the proposed development on the adjacent Deming Road roadway system, representatives of VLIET & O'NEILL, LLC, conducted manual traffic counts at the proposed Site Access intersection location with Deming Road. Additionally, available Connecticut Department of Transportation (ConnDOT) traffic data for the area roadways was obtained and reviewed. The obtained and reviewed traffic data revealed that the A.M. peak hour is 6:45 to 7:45 A.M. and the P.M. peak hour is 4:30 to 5:30 P.M.

After reviewing and balancing the count data, the traffic volumes were projected to the 2016 design year (the anticipated completion year for the development) using a one and one-half percent (1.5%) per year peak hour growth factor to account for normal growth in the area.

Inquiries were made to the ConnDOT Office of the State Traffic Administration (OSTA) and ConnDOT concerning approved or pending developments and roadway projects which may impact traffic conditions in the vicinity of the traffic study area for the proposed development. As a result of these inquiries, it was determined that there are currently no approved or pending developments or roadway improvement projects within the study area which need to be included in the traffic volumes. Figure Nos. 1 & 2 (Attached) show the 2015 Existing A.M. & P.M. peak hour traffic volumes. Figures Nos. 3 & 4 show the 2016 No-Build A.M. & P.M. peak hour traffic volumes which is defined as the design year traffic NOT including the proposed development traffic.

The obtained ConnDOT data revealed that the current Average Daily Traffic (ADT) on Deming road in the vicinity of the site is 13,800 vehicles (total of both directions.) The ADT of the Berlin Turnpike at its intersection with Deming Road is 30,000 vehicles (total of both directions.) The ADT of Christian Lane north of Deming Road is 6,900 vehicles and south of Deming Road is 16,000 vehicles. For comparison purposes, a two lane facility such as Deming Road, could support a bi-directional flow as high as 3,000 vehicles per hour (VPH) which indicates that Deming Road has substantial reserve capacity for the current roadway geometry.

SITE GENERATED TRAFFIC

Estimates of the amount of traffic to be generated by a proposed development are typically made using the Institute of Transportation Engineers (ITE) publication *Trip Generation -9th Edition.* The proposed development use is not part of the extensive data contained in *Trip Generation.* However, although the proposed development use is not contained in this resource, other Land Uses were reviewed in order to determine the probable expected Trip Generation for the proposed development. Trip Generation Land Use Codes (LUC) 110 General Light Industrial, 130 Industrial Park, 150 Warehousing and 750 Office Park were reviewed and assessed as part of determining the trip generation for the development. Additionally, VLIET & O'NEILL, LLC queried the owner of an existing similar development located in Southington, CT as part of determining the trip generation for the Deming Road Business Park.

As a result of the above data sources in conjunction with the proposed development size, the probable expected A.M & P.M. Peak Hour trip generation for the development use was determined. During the Deming Road A.M. peak hour, the development is expected to generate 40 vehicle trips in and 40 vehicle trips out of the site. During the Deming Road P.M. peak hour, the development is expected to generate 35 vehicle trips in and 35 vehicle trips out of the site.

The arrival and departure distributions for the expected peak hour site generated traffic were revealed by the manual traffic counts conducted on Deming Road, the ADT data as well as the proximity of the site to the nearby arterial roadway corridors. Based on the existing traffic patterns, Figure No. 5 depicts the Arrival/Departure Distribution for the Site Generated Traffic Volumes. Using the distribution, results in Figure Nos. 6 & 7 which depict the A.M. & P.M. Peak Hour Site Generated traffic volumes, respectively.

Using the arrival and departure distribution, the site generated traffic was then added to the No-Build traffic volumes to yield the 2016 Build A.M. & P.M. peak hour traffic volumes as shown in Figure Nos. 8 & 9.

ANALYSES

Intersection Analysis – In discussing intersection analyses, two terms are used to describe the operating condition of the roadway or intersection. These two terms are Volume to Capacity Ratio (v/c) and Level of Service (LOS).

The v/c ratio is a ratio of the volume of traffic using an intersection to the total capacity of the intersection (the maximum number of vehicles that can utilize the intersection during the analysis period). The v/c ratio can be used to describe the percentage of capacity utilized by a single intersection movement, a combination of movements, an entire approach or the intersection as a whole. As the v/c ratio approaches 1, the intersection nears capacity and it may no longer be able to process vehicles on all approaches efficiently.

LOS is a measure of the delay experienced by stopped vehicles at an intersection. LOS is rated on a scale from A to F, with A describing a condition of very low delay (less than 10 seconds per vehicle), and F describing a condition where delays exceed 50 seconds per vehicle. Therefore, unsignalized intersections with longer delay times are less acceptable to most drivers.

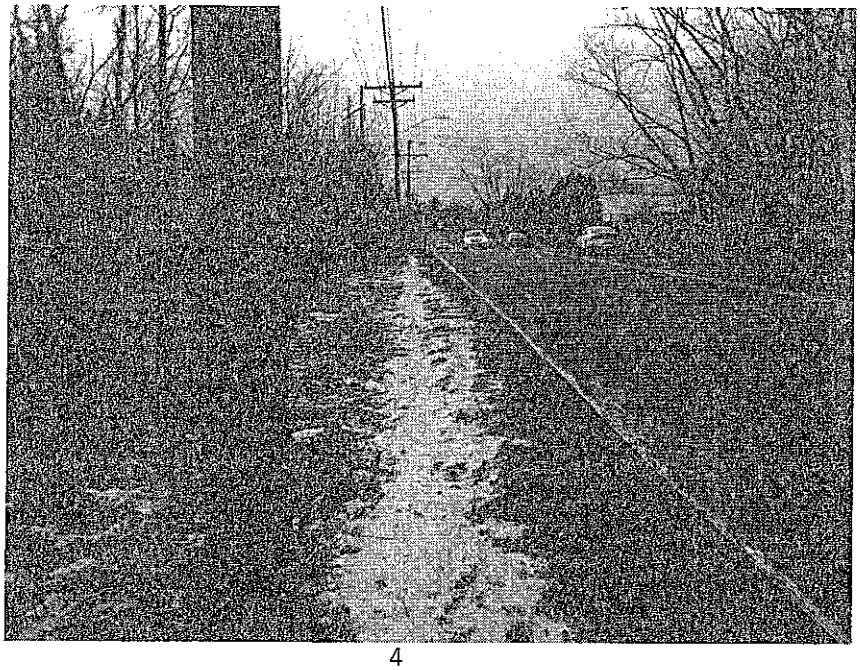
These definitions for v/c ratio and LOS, as well as the methodology for analyses, are taken from the "2010 Highway Capacity Manual" published by the Transportation Research Board (TRB).

Assessing the above referenced methodologies coupled with the extensive experience of VLIET & O'NEILL, LLC, it is our professional opinion that the proposed site access intersection with Deming road will operate at acceptable peak hour LOS for the site generated traffic volumes.

It is important to note that actual operations at the intersection will operate very efficiently due to the traffic stream gaps that are created by the adjacent signalized intersections of Deming Road with Christian lane and the Berlin Turnpike. Additionally, left turning site traffic from Deming Road into the site access driveway will not impede west bound Deming Road through traffic as the west bound travel lane width of twenty one feet (21') allows "by-pass" capability for through traffic around left turning traffic.

Site Distance Analysis – Intersection Sight Distances (ISD) for vehicles entering and exiting the proposed site access driveway intersection with Deming Road were field measured. ISD looking to the left (west) and right (east) both exceed seven hundred and fifty feet (750'). The ISD available at the intersection location will provide for safe and efficient access to and from the development parcel in consideration of the level of site generated traffic, Deming Road traffic volumes/speed, Deming Road flow/gaps created by the adjacent signalized intersections and the west bound roadway lane geometry which permits by-pass capability. Below are photographs of the ISD that will be afforded to exiting site traffic.

ISD to the Left looking west at east bound traffic



ISD to the Right looking east at west bound traffic

Accident Analysis – Accident data was obtained from ConnDOT for the area roadways in the vicinity of the site. Within the past three (3) year time frame of available data reviewed, no significant identifiable accident rates or patterns were revealed. No accident history was revealed for the immediate section of Deming Road along the site frontage. Accident history for the signalized intersections east and west of the site were consistent with the amount of traffic processed at the intersection coupled with the type of control in place.

In review of the extremely small amount of traffic which will be generated by the development compared to existing traffic volumes coupled with the existing Deming Road geometry, no appreciable changes in the accident frequencies for the roadways in the development area are expected.

CONCLUSION

In summary, it is the professional opinion of VLIET & O'NEILL, LLC that the probable expected traffic to be generated by the proposed Deming Road Business Park can be safely and efficiently introduced into as well as accommodated by the adjacent roadway system. The development traffic will not disrupt the continuity of weekday peak hour traffic flow on Deming Road or the area roadway system.

Thank you for choosing VLIET & O'NEILL, LLC to work on this matter and please feel free to call with any questions.

Very truly yours,

William A. Vliet, P.E.
Manager for VLIET & O'NEILL, LLC

ENVIRONMENTAL IMPACT STATEMENT
As required by section XII B.5. a.thru i. of the Berlin Zoning regulations
BERLIN, CT-DEMING ROAD – DEMING ROAD BUSINESS PARK
RICHARD MUNSON/PROGRESSIVE DEVELOPMENT

5A. There is very little impact on the surrounding neighborhood since the majority of the existing land uses within 500 feet are light and heavy industrial. Proposed use is light industry. Surrounding proposed site is landfill to the west, auto repair to the east, wetland/flood plain to the east/south and heavy industry to the north on the opposite side of Deming Road. The nearest residential is approximately 500' to the east on the south side of Deming and about 2000' to the west on Christian Lane, well removed from proposed site. Proposed site will be screened from the traveling public on Deming Road. The uses on the site will be such that very little noise, odor, or traffic will be generated. A separate traffic report will be prepared which is expected to show minimal site generated traffic. All of the businesses in the facility will have none or very few visitors since on site direct public services are not proposed. Also most businesses will be closed during weekend hours. There will be no impact on surrounding property values and neighborhood stability.

5B. The uses in this zone were recently approved by PZC action so the issues have been discussed and considered. Our plan is consistent with the objectives of the 2013 POCD, particularly goal #3.

5C. A separate environmental report will be prepared by David lord, licensed soil scientist and licensed biologist. This report will be submitted as part of the record.

5D. The demands placed on the town's infrastructure, water, sewer and storm drainage are minimal. Maximum water and sewer flows are estimated to be 2,686 GPD. Town facilities have sufficient capacity to accept this small flow and

Phone: (860) 621-3638 Fax: (860) 621-9609 Email: info@kratzertjones.com
1755 Meriden - Waterbury Tpke.
P.O. Box 337
Milldale (Southington) CT 06467-0337

have been approved by the local water and sewer authorities. A drainage report has been prepared showing no impact to the drainage system and natural resources in the area. An inland wetlands application has been submitted to the local IW commission which has reviewed and approved the proposed activity on the site.

5E. A separate traffic study will be prepared to define any impacts from this development. It will be submitted under separate cover.

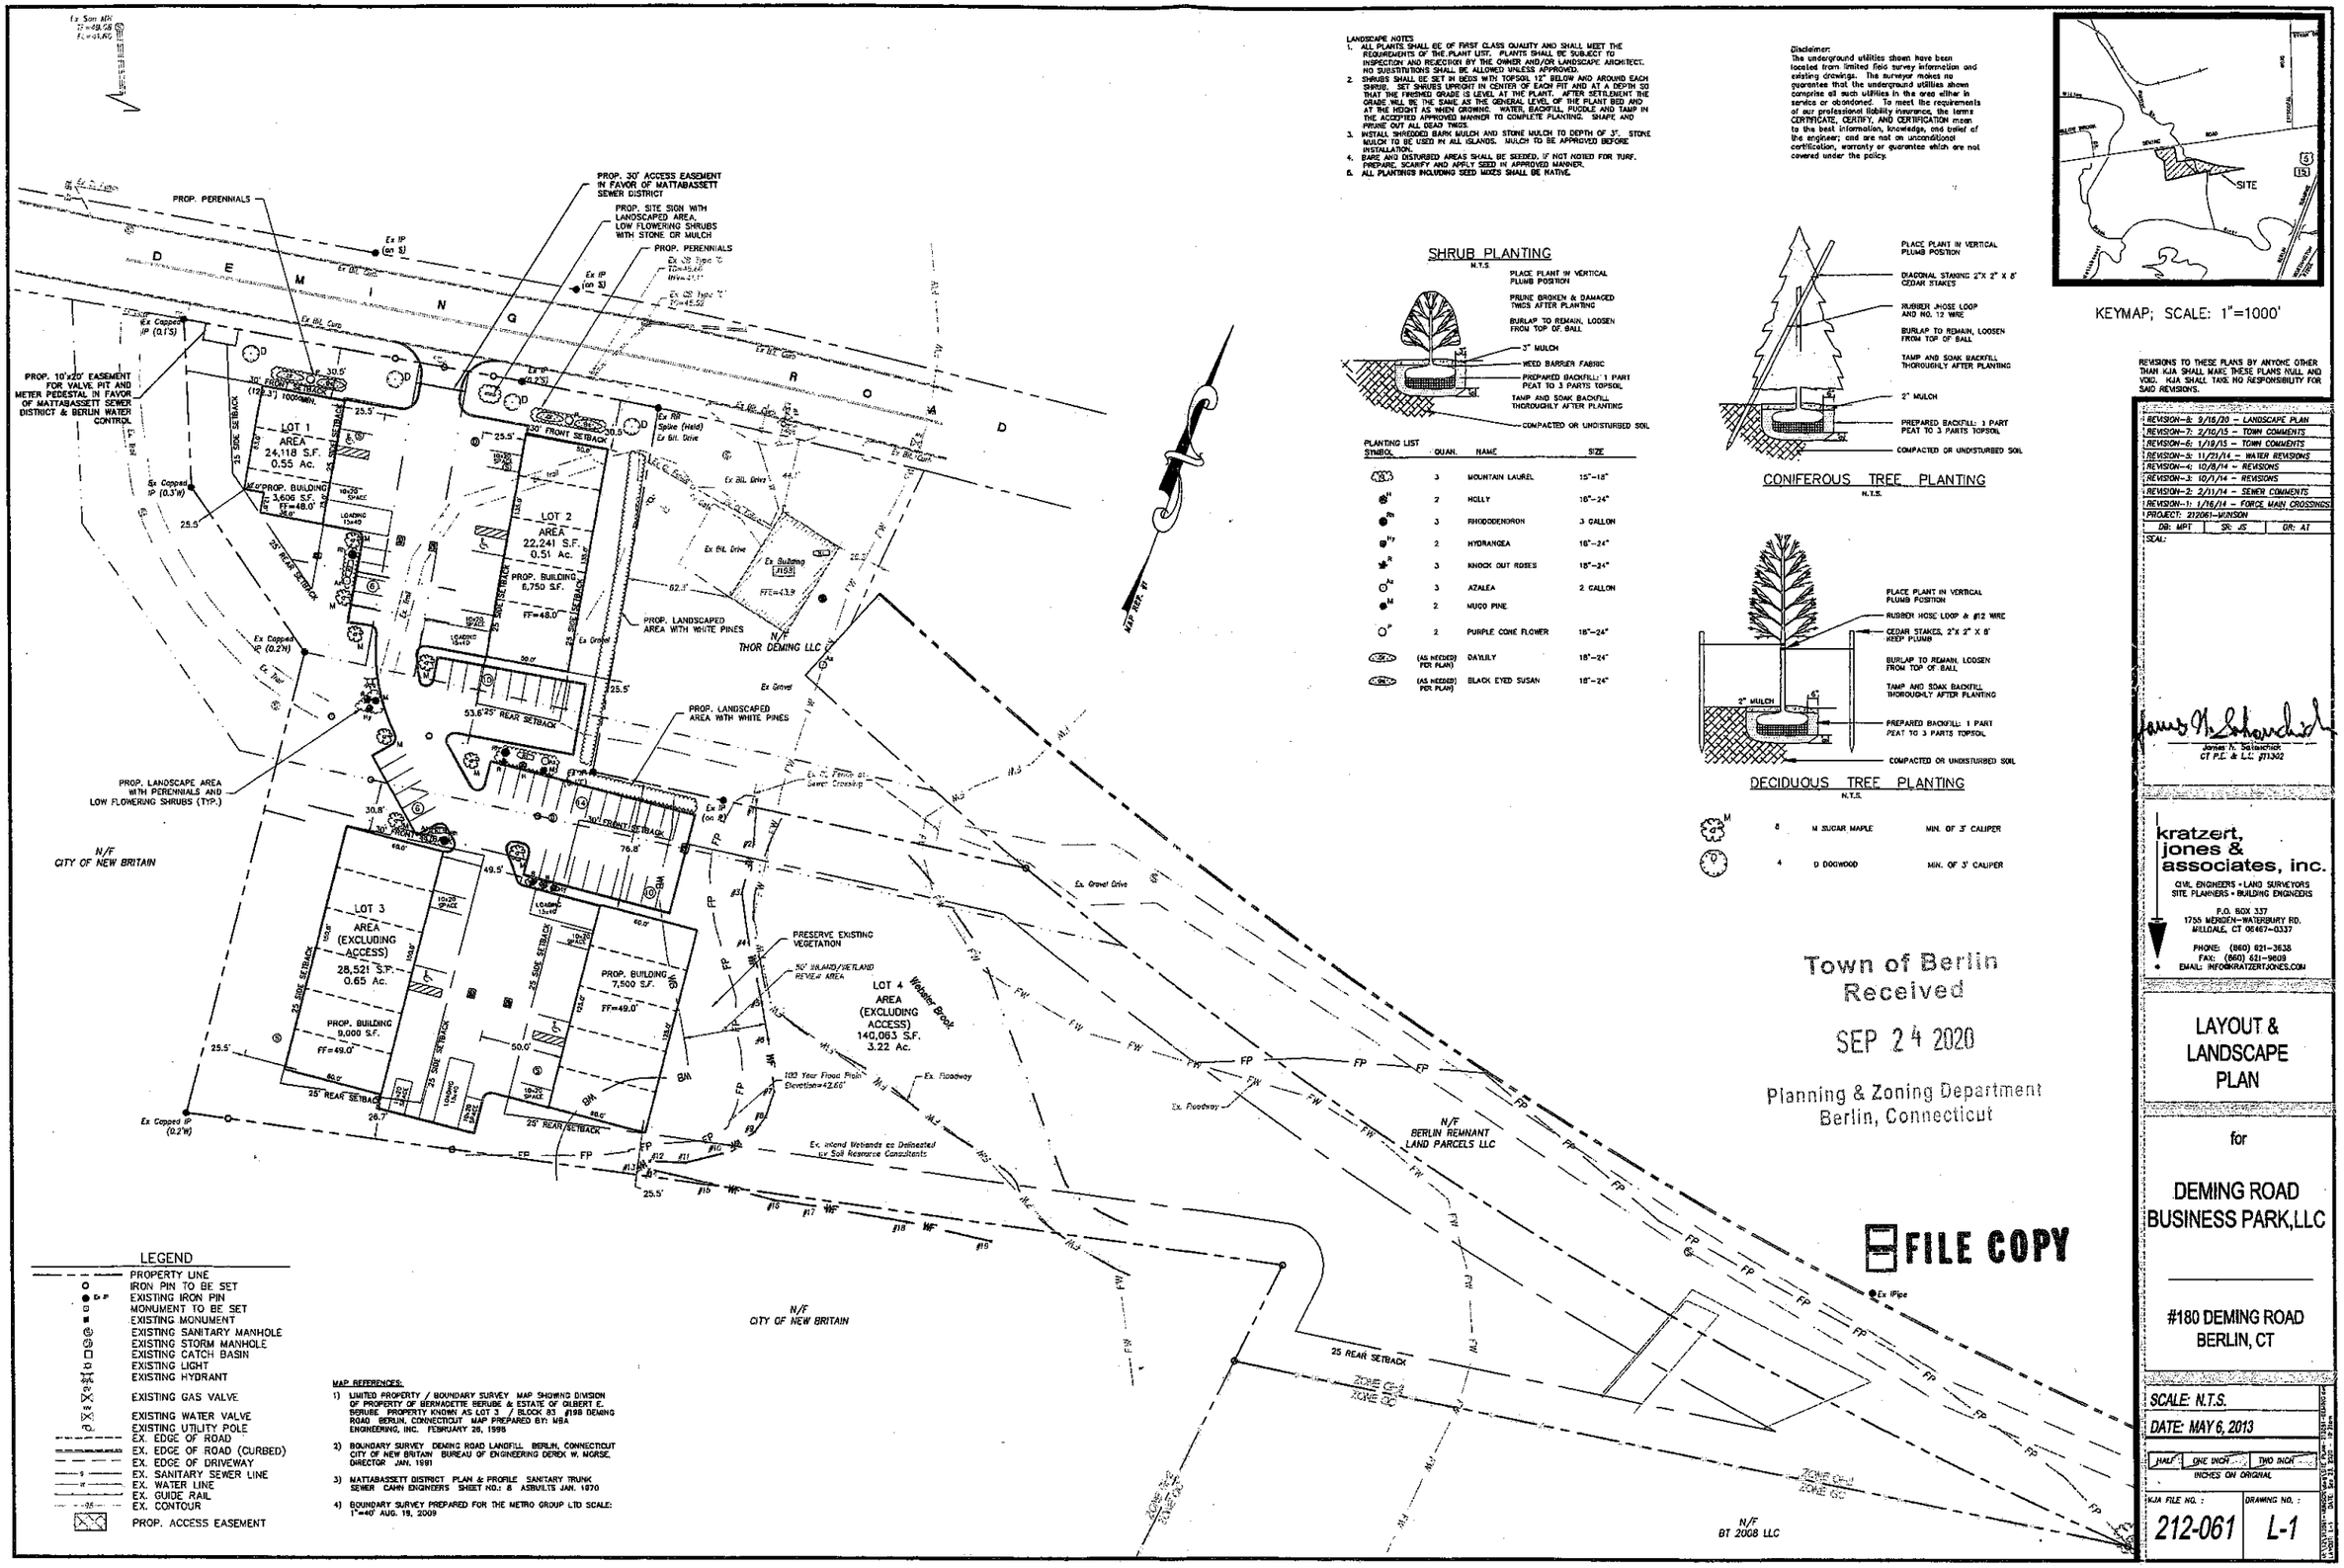
5F. There will be no permanent residency in the buildings proposed so town services will be limited to fire, police and medical response during normal working hours. Small businesses are proposed so recreation needs will not be impacted. Many of the businesses will be relocated from present residential areas so overall impact will be insignificant and the zoning benefits will be considerable.

5G. Design team does not anticipate any adverse impacts from this development.

5H. Alternative to this proposal is to do nothing, let the land sit idle and not reap the benefits to the town from taxes, employment and service opportunities.

5I. Project has been approved by IW Commission with Abtech CB filters for proposed drainage system. Traffic study shows no mitigation needed.

Anthony J. Tranquillo, P.E.



LANDSCAPE NOTES

1. ALL PLANTS SHALL BE OF FIRST CLASS QUALITY AND SHALL MEET THE REQUIREMENTS OF THE PLANT LIST. PLANTS SHALL BE SUBJECT TO INSPECTION AND REJECTION BY THE OWNER AND/OR LANDSCAPE ARCHITECT. NO SUBSTITUTIONS SHALL BE ALLOWED UNLESS APPROVED.
2. SHRUBS SHALL BE SET IN BEDS WITH TOPSOIL 12" BELOW AND AROUND EACH SHRUB. SET SHRUBS UPRIGHT IN CENTER OF EACH PIT AND AT A DEPTH SO THAT THE FINISHED GRADE IS LEVEL AT THE PLANT. AFTER SETTLEMENT THE GRADE WILL BE THE SAME AS THE GENERAL LEVEL OF THE PLANT BED AND AT THE HEIGHT AS WHEN GROWING. WATER, BACKFILL PUDDLE AND TAMP IN THE ACCEPTED APPROVED MANNER TO COMPLETE PLANTING. SHAPE AND PRUNE OUT ALL DEAD TWIGS.
3. INSTALL SHREDDED BARK MULCH AND STONE MULCH TO DEPTH OF 3". STONE MULCH TO BE USED IN ALL ISLANDS. MULCH TO BE APPROVED BEFORE INSTALLATION.
4. BARE AND DISTURBED AREAS SHALL BE SEEDED, IF NOT NOTED FOR SOD. PREPARE, SCARIFY AND APPLY SEED IN APPROVED MANNER.
5. ALL PLANTINGS INCLUDING SEED MIXES SHALL BE NATIVE.

STANDARD SITE PLAN NOTES:

1. PARCEL OWNER: LEO J. BERUBE
2. CONTOUR INTERVAL = 2'
3. ELEVATIONS BASED ON U.S.C. & G.S. DATUM.
4. TOPOGRAPHY IS FROM FIELD SURVEY.
5. THE INDICATED EXISTING UTILITIES ARE BASED ON LIMITED INFORMATION. THE LOCATIONS ARE APPROXIMATE AND NOT GUARANTEED. ALL UTILITIES MAY NOT BE SHOWN. PRIOR TO ANY EXCAVATION, CONTRACTOR TO NOTIFY "CALL BEFORE YOU DIG" AT 1-800-922-4455.
6. CONTRACTOR REQUIRED TO FIELD VERIFY ALL DIMENSIONS, ELEVATIONS, QUANTITIES AND DETAILS PRIOR TO ANY CONSTRUCTION.
7. LOT AREA = SEE MAP
8. PROPERTY IS LOCATED IN ZONE GI-2 (SEE ZONING TABLE).
9. ALL CONSTRUCTION SHALL CONFORM TO CONN. DOT 816s.
10. SEE ZONING TABLE.
11. SEE PARKING TABLE.
12. PRESENT LAND USE: VACANT
    PROPOSED LAND USE: INDUSTRIAL
13. PLANNING AND ENGINEERING DEPARTMENTS TO BE NOTIFIED AT 828-7060 AND 828-7014, 24 HOURS IN ADVANCE OF ANY CONSTRUCTION ACTIVITY.
14. ALL WORK IN CONNECTION WITH THIS PLAN SHALL BE COMPLETED WITHIN FIVE YEARS OF THE DATE OF APPROVAL, OR THE APPROVAL IS NO LONGER VALID.
15. NO CERTIFICATE OF OCCUPANCY SHALL BE ISSUED UNTIL ALL SITE WORK IS COMPLETED, OR WHEN SPECIFICALLY APPROVED BY THE PLANNING AND ZONING COMMISSION.
16. THE APPLICANT SHALL BE RESPONSIBLE FOR OBTAINING THE NECESSARY STATE AND FEDERAL ENVIRONMENTAL PERMITS IF ANY.
17. ALL PROPOSED LIGHTS TO BE RECESSED FULL CUTOFF FIXTURES WITH RECESSED LENSES ONLY.
18. FLOOD LAMPS TO BE DIRECTED TOWARDS THE GROUND AND ALL FLOOD LAMPS TO BE FULL CUTOFF WITH RECESSED LENSES ONLY.
19. WATER SERVICE SIZING TO BE DETERMINED BY THE BERLIN WATER DEPARTMENT UPON RECEIPT OF ALL PERTINENT WATER FIXTURE DATA.
20. UNDERGROUND FUEL TANKS SHALL BE PROHIBITED.
21. PROPERTY TO BE SERVED BY PUBLIC WATER AND SANITARY SEWER.
22. FOOTING DRAINS TO BE TIED INTO STORM SYSTEM
23. ANY DAMAGE TO CURB OR ROADWAY TO BE RESTORED TO TOWN STANDARDS

MATTABASSETT DISTRICT CONTACT NOTES:

THE CONTRACTOR SHALL NOTIFY THE MATTABASSETT DISTRICT ENGINEER, AT (860) 635-5550, EXT 205:

1. WHEN A PRE-CONSTRUCTION CONFERENCE FOR THIS WORK HAS BEEN SCHEDULED.
2. 24-HOURS IN ADVANCE OF ANY WORK BEING PERFORMED WITHIN THE MATTABASSETT DISTRICT'S ROW. NO WORK SHALL BE PERFORMED WITHIN THE DISTRICT'S ROW UNLESS THE DISTRICT ENGINEER IS NOTIFIED OR PRESENT.
3. FOR CHANGES TO THE PROPOSED FACILITIES WITHIN THE DISTRICT'S ROW OR THE FLOW METERING DEVICE. ALL CHANGES SHALL BE APPROVED BY THE DISTRICT ENGINEER PRIOR TO CONSTRUCTION.

EROSION AND SEDIMENTATION CONTROL NOTES:

1. LAND DISTURBANCE SHALL BE KEPT TO A MINIMUM. RESTABILIZATION SHALL BE SCHEDULED AS SOON AS PRACTICABLE. FOR THOSE AREAS WHICH ARE LEFT EXPOSED FOR MORE THAN 30 DAYS TEMPORARY SEEDING FOR STABILIZATION SHALL BE UTILIZED. ANNUAL RYEGRASS MAY BE UTILIZED OR AN APPROVED EQUAL.
2. SLOPES SHALL BE RESTRICTED TO 2' HORIZONTAL/1' VERTICAL MAXIMUM OR FLATTER THROUGH GRADING AND/OR RETAINING WALLS.
3. DISTURBED AREAS, EXCEPT PAVED AREAS, SHALL BE LOAMED (4"MIN.) AND SEEDED OR MULCHED.
4. ALL EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE CONSTRUCTED IN ACCORDANCE WITH THE STANDARDS AND SPECIFICATIONS OF THE EROSION AND SEDIMENTATION CONTROL HANDBOOK.
5. THE APPLICATION AND SPECIFIC DETAILS OF THE EROSION AND SEDIMENTATION CONTROL SHALL FOLLOW THE CT COUNCIL ON SOIL AND WATER CONSERVATION MANUAL ENTITLED "GUIDELINES FOR SOIL EROSION AND SEDIMENT CONTROL", DATED JANUARY 1985 AS AMENDED TO DATE.
6. ALL CONTROL MEASURES SHALL BE MAINTAINED IN EFFECTIVE CONDITION THROUGHOUT THE CONSTRUCTION PERIOD.
7. ADDITIONAL CONTROL MEASURES SHALL BE INSTALLED DURING THE CONSTRUCTION PERIOD IF DEEMED NECESSARY BY THE TOWN PLANNER AND/OR THE TOWN ENGINEER.
8. SEDIMENTATION BARRIERS TO BE FIBRETEX 150 GRADE, APPROVED EQUAL, OR STAKED HAYBALES.
9. SEDIMENTATION BARRIER TO BE INSTALLED AS SHOWN ON THIS PLAN PRIOR TO ANY CONSTRUCTION. PLOT PLANS FOR INDIVIDUAL LOTS SHALL CONTAIN DETAILED DELINEATION OF SILTATION BARRIERS INCLUDING ANY ADDITIONAL EROSION CONTROLS AS DEEMED NECESSARY.
10. CONTRACTOR IS RESPONSIBLE FOR CORRECTING ANY UNFORSEEN FIELD CONDITIONS.
11. ALL CONSTRUCTION SHALL CONFORM TO THE STANDARDS OF THE MUNICIPALITY.
12. RICH MUNSON OR HIS DULY AUTHORIZED AGENT (860) 919-6917 IS RESPONSIBLE FOR NOTIFYING THE MUNICIPALITIES PLANNING AND ENGINEERING DEPARTMENTS AT LEAST 24 HOURS IN ADVANCE OF START OF ANY CONSTRUCTION ACTIVITY.
13. RICH MUNSON OR HIS DULY AUTHORIZED AGENT (860) 919-6917 IS ASSIGNED THE RESPONSIBILITY FOR IMPLEMENTING THIS EROSION AND SEDIMENTATION CONTROL PLAN. THIS RESPONSIBILITY INCLUDES THE INSTALLATION AND MAINTENANCE OF CONTROL MEASURES, INFORMING ALL PARTIES ENGAGED ON THE CONSTRUCTION SITE OF THE REQUIREMENTS AND OBJECTIVES OF THE PLAN, NOTIFYING THE PLANNING AND ZONING OFFICE OF ANY TRANSFER OF THIS RESPONSIBILITY, AND FOR CONVEYING A COPY OF THE EROSION AND SEDIMENT CONTROL PLAN IF THE TITLE OF THE LAND IS TRANSFERRED.
14. SEDIMENT CONTROL: TEMPORARY PERVIOUS BARRIERS, USING HAY BALES OR SILT FENCE REINFORCE WITH WOODEN STAKES SHALL BE USED AT ALL AREAS WHERE STORM WATER CONTAINING SUSPENDED SEDIMENT COULD DRAIN OFF SITE.
15. SILT FENCE AND/OR HAY BALES TO BE INSTALLED PRIOR TO COMMENCMENT OF CONSTRUCTION OPERATIONS. ANY DAMAGED BARRIERS SHALL BE REPLACED AND/OR RESET IMMEDIATELY FOLLOWING DAMAGE.
16. PURSUANT TO THE REGULATIONS, A LAYER OF TOPSOIL SHALL BE SPREAD OVER THE EXCAVATED AREA, LOAMED & SEEDED, 4 INCHES MINIMUM IN DEPTH IN ACCORDANCE WITH THE APPROVED CONTOUR PLAN.
17. CATCH BASIN MAINTENANCE SCHEDULE:
    STRUCTURES TO BE INSPECTED SEMI-ANNUALLY. SEDIMENT TO BE EXTRACTED AS NEEDED PER INSPECTION IN THE SPRING AND FALL, AND DISPOSED OF IN AN ENVIRONMENTALLY ACCEPTABLE MANOR. THE PLANNING DEPARTMENT IS TO BE NOTIFIED AT (860) 276-2648 OF INSPECTIONS AND/OR CLEANINGS.

Disclaimer:
The underground utilities shown have been located from limited field survey information and existing drawings. The surveyor makes no guarantee that the underground utilities shown comprise all such utilities in the area either in service or abandoned. To meet the requirements of our professional liability insurance, the terms CERTIFICATE, CERTIFY, AND CERTIFICATION mean to the best information, knowledge, and belief of the engineer; and are not an unconditional certification, warranty or guarantee which are not covered under the policy.

CONSTRUCTION SEQUENCE:

1. AN ON-SITE JOB MEETING TO DISCUSS AND PLAN IMPLEMENTATION OF EROSION CONTROLS SHALL TAKE PLACE PRIOR TO COMMENCEMENT OF CONSTRUCTION ACTIVITY.
2. ESTABLISH EROSION AND SEDIMENTATION CONTROL MEASURES, AS SHOWN ON PLAN PRIOR TO INITIATING ANY CONSTRUCTION ACTIVITY.
3. CALL BEFORE YOU DIG 1-800-922-4455.
4. CALL UTILITY COMPANY TO DISCONNECT SERVICES
5. OBTAIN DEMOLITION PERMIT
6. POST APPROPRIATE BONDS.
7. REMOVE TREES AND VEGETATION TO CLEARING LIMITS SHOWN;
8. DEMOLISH AND REMOVE STRUCTURES.
9. INSTALL ANTI-TRACKING PAD.
10. OBTAIN TEMPORARY POWER.
11. START MASS EARTH MOVEMENT AND SITE REDEVELOPMENT.
12. AS THE SHAPE OF THE SITE CONTINUES, START BUILDING EXCAVATION AND PLACE FOUNDATION, SLAB AND BUILDING.
13. CONSTRUCT SITE UTILITIES; PROTECT CATCH BASINS WITH STAKED HAY BALES, TRAP ANY SEDIMENT THAT ACCUMULATES DURING CONSTRUCTION.
14. FINISH GRADE AND PLACE GRAVEL BASE FOR PAVED AREAS.
15. IMPLEMENT ANY D.O.T IMPROVEMENTS REQUIRED FOR ROADWAY AND CURB CUT.
16. INSTALL SITE LIGHTING AND LANDSCAPING.
17. CONSTRUCT CONCRETE WALKS AND PLACE BITUMINOUS CONCRETE.
18. FINISH GRADE SITE; SPREAD TOPSOIL AND SEED ALL AREAS DISTURBED BY CONSTRUCTION. STABILIZE ALL SLOPES.

SUGGESTED SEED MIXTURE	LBS/AC	LBS/1000 SF
KENTUCKY BLUEGRASS	20	0.45
CREEPING RED FESCUE	20	0.45
PERENNIAL RYEGRASS	5	0.10
	45	1.00

19. REMOVE SEDIMENT AND DISPOSE OF OFFSITE IN AN ENVIRONMENTALLY ACCEPTABLE MANNER.
20. REMOVE ANTI-TRACKING PAD, REPAIR ANY DAMAGE TO CURBING.
21. AFTER DISTURBED AREAS HAVE HAD VEGETATION RE-ESTABLISHED ON THEM, SILTATION BARRIERS SHALL BE REMOVED.

Re: Traffic Study - ADDENDUM
Deming Road Business Park
198 Deming Road, Berlin CT

Dear Attorney Sullivan:

As requested and as we discussed during our telephone conversation, VLIET & O'NEILL, LLC has reviewed our previously submitted January 20, 2015 Traffic Study submitted for the subject project (copy attached). This letter has been prepared as an Addendum to the submitted previously Traffic Study.

As part of my review, specific focus has been on updated traffic and accident data since the time of the submitted Traffic Study. Also, updated review of the Site Access Intersection location relative to Intersection Sight Distance (ISD) has been performed. The following is a summary of my updated review:

Traffic & Accident Data

I have accessed and reviewed available Connecticut Department of Transportation (ConnDOT) traffic and accident data. The data has revealed that traffic volumes in the area have not grown as fast as the projections in the original traffic study.

Although the original study projected traffic to a Build Year of 2016, the current traffic levels have not reached those projections. Traffic volumes, during peak hours in Connecticut, have seen a minimal increase and in many cases a slight decline over the past few years. This can be attributed to work related traffic during peak travel hours associated with flexible work hours as well as an ever increasing "work from home" work force.

Updated accident data for the area reveled once again that there is no significant identifiable accident rates or patterns on the roadways/intersections within the project study area.

Sight Distance at the Site Access Intersection with Deming Road

In my originally submitted Traffic Study, I indicated that Intersection Sight Distances (ISD) for vehicles entering and exiting the proposed site access driveway intersection with Deming Road were field measured. Based on review of existing available mapping, the proposed location of the Site Driveway Intersection still provide for safe and efficient to and from the development parcel in consideration of the level of site generated traffic. Below are updated images from current available sources that show conditions along Deming Road have remained unchanged:

ISD to the Left looking west at east bound traffic

ISD to the Right looking east at west bound traffic

CONCLUSION

In summary, it is still the professional opinion of VLIET & O'NEILL, LLC that the probable expected traffic to be generated by the proposed Deming Road Business Park can be safely and efficiently introduced into as well as accommodated by the adjacent roadway system. The development traffic will not disrupt the continuity of weekday peak hour traffic flow on Deming Road or the area roadway system.

Thank you for choosing VLIET & O'NEILL, LLC to work on this matter and please feel free to call with any questions.

Very truly yours,

William A. Vliet, P.E.
Manager for VLIET & O'NEILL, LLC

WILLIAM A. VLIET, P.E.

Curriculum Vitae

Mr. Vliet is a licensed Professional Engineer, experienced in traffic and transportation engineering. He has conducted traffic studies; analyzed traffic flows and roadway requirements; and designed roadways and traffic signals. He has designed mitigative roadway improvements associated with site generated development traffic. Mr. Vliet has also been a land surveyor as well as an inspector on traffic control signal and roadway construction projects.

He is an ACTAR Accredited Traffic Accident Reconstructionist, providing accident evidence collection assistance to the Manchester Police Department and accident reconstruction services to private sector clients in both civil and criminal cases. He has provided expert witness testimony in Connecticut and New Jersey.

License/Accreditation

Licensed Professional Engineer
Connecticut, since 1988

Accredited Traffic Accident Reconstructionist
ACTAR, since 1993

Education

Bachelor of Science, Civil Engineering, 1982
University of Hartford, West Hartford, CT

Professional Experience

Vliet & O'Neill, LLC
1998 – Present

Motor Vehicle Crash Reconstruction

- Review case files.
- Conduct on-site investigations.
- Conduct vehicle testing.
- Obtain "Black Box" data from vehicles.
- Reconstruct crashes.
- Analyze driver and pedestrian actions.
- Provide reports.
- Provide diagrams and exhibits.
- Provide 2D and 3D animations and/or simulations.
- Provide expert witness testimony.

Traffic Planning and Engineering

- Assess traffic flow conditions.
- Devise solutions to traffic problems.
- Design geometric modifications and traffic control signals.
- Conduct traffic impact studies for residential and commercial developments.
- Represent clients at Planning & Zoning meetings.

Traffic Consultant to the Town of Manchester, CT (1998 – 2002)

- Review applications to the Planning and Zoning Commission.
- Respond to citizen complaints.
- Design traffic control devices and traffic signals.
- Construction Management.

Manchester Police Department
(Volunteer Position)
1994 – Present

Member of the Accident Reconstruction Team

- Respond to serious and fatal accidents
- Assist with on-scene evidence identification and collection.
- Occasional follow-up reconstruction assistance.

Professional Experience
(continued)

Fuss & O'Neill, Inc.
1985 - 1998

Private Developer Work

- Prepared over 100 traffic impact studies for projects ranging from single family homes to regional shopping malls to University Campuses to Major Pharmaceutical Companies and complex office developments.
- Identified and designed necessary roadway and intersection improvements to mitigate the impact of development traffic. Work included traffic control signal system design.
- Complete applications to local Planning & Zoning Commissions for approvals.
- Represent clients at Planning & Zoning meetings.
- Work with municipal staff members to resolve design issues.
- Oversaw construction activities for designed improvements.

Public Agency Work

Project Manager for ConnDOT closed-loop traffic signal systems.

- Coordinated design work with local officials/Legal Traffic Authorities.
- Provided final design documents in accordance with ConnDOT and MUTCD design guidelines.
- Review design plans for conformance with federal and state design requirements.
- Attend meetings with federal, state and local officials to resolve project issues.

Project Traffic Engineer for ConnDOT Interstate Ramp System modifications.

- Provided traffic engineering volume projections.
- Analyzed future traffic flow conditions.
- Determined lane geometry for future traffic flow conditions.
- Assessed current accident data.
- Presented project information to local officials.

Project Traffic Engineer for Town of Manchester Main Street Reconstruction.

- Assessed and analyzed traffic volume data.
- Determined intersection and corridor geometry for future conditions.
- Designed traffic signal plans and system for corridor intersections.

Professional Experience
(continued)

Consultant Engineer to Town of Southington Planning/Zoning Commission.

- Provided traffic impact review/analysis of development applications.
- Presented review comments to town staff and applicants.
- Presented review findings to the Planning/Zoning Commission.

Motor Vehicle Crash Reconstruction

- Reviewed case files
- Conducted on-site investigations.
- Conducted vehicle testing.
- Obtained "Black Box" data from vehicles
- Reconstructed crashes.
- Analyzed driver and pedestrian actions.
- Provided reports.
- Provided diagrams and exhibits.
- Provided expert witness testimony

Township of Wayne, New Jersey
1983 – 1985

Town Traffic Engineer/Traffic Engineering

- Reviewed all site plan and sub-division development applications.
- Reviewed Traffic impact studies submitted in support of development application approval by the Planning and Zoning Commission.
- Provided planning department staff with comments and recommendations concerning traffic impact associated with the development applications.
- Met with planning department staff, other town staff and the applicant to discuss and resolve traffic issues prior to Planning and Zoning Commission meetings.
- Presented traffic engineering review findings to the Planning and Zoning Commission.
- Implemented a joint review process between the town police department and the traffic engineering office for high accident locations.
- Responded with the town police department to serious and fatal traffic accidents as part of the on-scene evidence collection team.

Professional Experience
(continued)

- Maintained signal timings for all town owned signalized intersections.
- Coordinated all signing, striping and signal maintenance for town roadways.
- Acted as Project Manager for consultant designed transportation projects.
- Coordinated town development and improvement projects with the New Jersey Department of Transportation as required.

County of Passaic, New Jersey
1982 – 1983

Civil Engineer/Civil Engineering

- Worked with the County Engineer and County Traffic Engineer in performing various civil engineering duties.
- Reviewed land development applications affecting county roadways/facilities for traffic and drainage impacts.
- Prepared and presented review comments to county planning department staff and development applicants as required.
- Assisted the County Traffic Engineer concerning maintenance and improvements to signing and striping of county roadways.
- Designed minor structural improvements for county buildings and facilities.

Specialized Training

Highway Safety Evaluation, 1982
Federal Highway Administration

Traffic Control Devices Handbook, 1984
Federal Highway Administration

Accident Investigation, 1984
The Police Academy of Passaic County, New Jersey

Special Problems in Accident Reconstruction, 1985
Institute of Police Technology & Management, University of North Florida

Specialized Training
